DECORATIVE PAPERS
COMBINATION PANELS
WOOD VENEER PANELS

LAMINATED PANELS

IT'S SIMPLE.

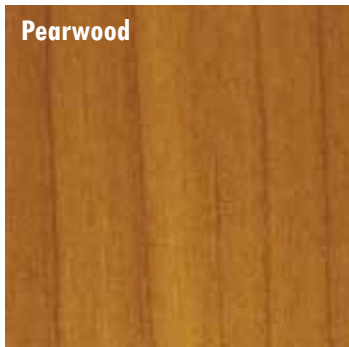

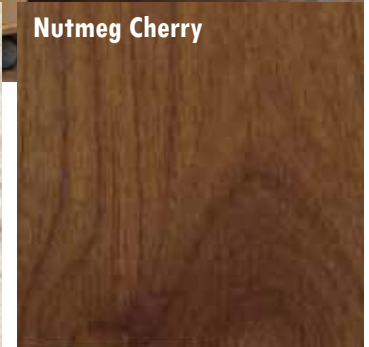

We make flat panels look fabulous.

DECORATIVE PAPERS

We have several laminating lines throughout the company that allow us to lay up decorative foils and light basis weight decorative papers on MDF or particleboard. The durability and wear resistance of these decorative surfaces has improved over the years and make them perfect for store fixtures, RTA furniture, office furniture, shelving, cabinets and more. Many of specifiers will chose papers and foils for their range of decors as well as their cost effectiveness.

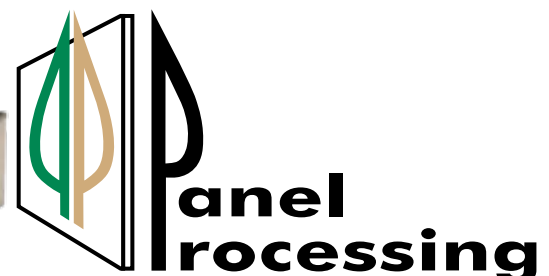

- 1000s of designs available through one of our preferred suppliers
- Many of our sites stock several popular decors
- Excellent machinability
- Full fabrication of panels available at multiple sites
- Great for slatwall and pegboard

VENEER COMBINATION PANELS

- HPL or TFL
- Thicknesses 5/8" & 3/4"
- 4' width
- 8' lengths
- Sanded and ready for finish
- Rustic, Plain Slice and Whole Piece veneers
- Particleboard core

THERMALLY FUSED LAMINATES

At our Klamath Falls facility in Oregon, we operate a Wemhöner Thermal Fused Melamine Line where we laminate Melamine and Veneer/Melamine Combination Panels. We also operate a components division where we offer premium quality cutting, edge banding and line boring.

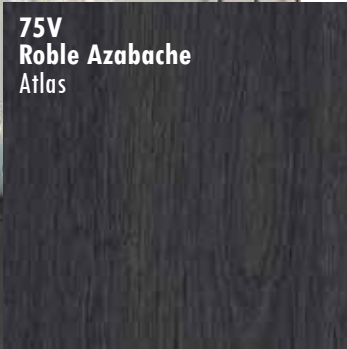

- Over 35 standard designs and colors in stock
- Panel thicknesses from 1/4" to 1-1/4"
- 4' & 5' widths in 8', 9' & 10' lengths
- Sanded edges/ends for safe and easy handling
- Multiple cores available: Pine Particleboard, Fir Particleboard, MDF, Plywood Cores, FSC® Certified, NAUF, NAF (Carb Exempt) & Specialty Cores
- Cut-to-size
- Edge banding
- Custom components
- Special packaging
- Full fabrication of panels available at multiple sites

EUROPEAN TFL DÉCOR BY FINSA

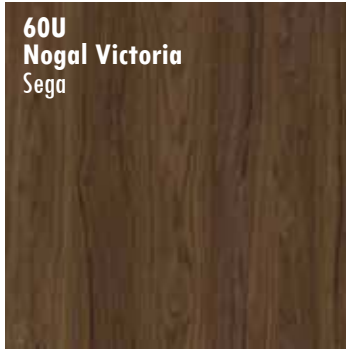

Panel Processing is excited to present The Jane Kelly Collection, a compilation of Finsa's Thermally Fused Laminates. The award winning designer specifically selected 23 designs and textures from the

75V Roble Azabache Atlas

60U Nogal Victoria Segá

Finsa Gama Duo and Studio Collections to create The Jane Kelly Collection. The European TFL décor features synchronized finishes and deep textures in a range of colors with a gorgeous level of detail and realism. Antibacterial certified, matching HPL and edge banding available. Imported and stocked in the U.S.

62U Roble Chicago Blues - Deep Texture

57U Roble Iguazu Rock & Roll - Deep Texture

61U Roble Memphis Blues - Deep Texture

Veneers

- High quality hardwood veneers
- Composite veneers can be overlaid with either heat activated resins or cold pressed
- Panels can be specified FSC® Certified (FSC-C014474)
- Formaldehyde free
- Multiple thicknesses & sizes available

Plywood

- High uniform strength & durability
- Multiple plywood cores available
- Panels can be specified FSC® Certified
- Formaldehyde free
- Multiple thicknesses & sizes available

Particleboard

- Excellent machinability which extends tool life
- Consistent quality & design flexibility
- A light brown to buff color - perfect for light laminate papers
- Wide range of physical properties that provides maximum design flexibility for specifiers & end users
- Available in NAF and FSC® Certified
- Multiple thicknesses & sizes available

MDF - Medium Density Fiberboard

- Smooth, uniform & dense
- Great stability & strength
- Light colored substrate
- Engineered for a smooth, unblemished surface
- Homogeneous core for great machining and throughput
- Available in NAF and FSC® Certified
- Multiple thicknesses & sizes available

DECORATIVE SURFACES 101

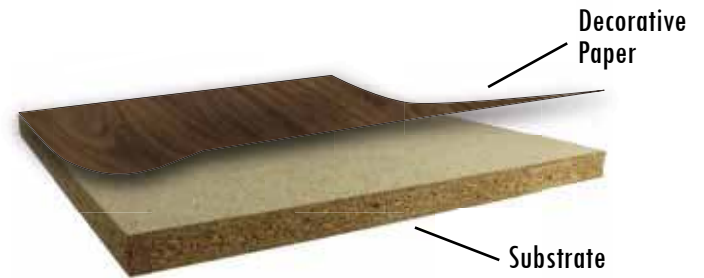

High Pressure Laminate (HPL)

- Multiple layers of kraft paper are saturated with resin, a layer of décor paper is placed on top and then fused together under heat and pressure
- The curing process transforms the resin into a plastic converting the paper into a rigid laminated sheet
- Suitable for high impact horizontal applications

Thermally Fuse Laminate (TFL)

- Resin-impregnated décor paper is fused directly to the substrate
- No kraft paper is used in TFL
- Heat and pressure activate the resin in the sheet creating a bond with the substrate
- Great for low impact and vertical applications
- Once known as Thermally Fused Melamine

11 Facilities in 6 States

Made in the U.S.A.
...and proud of it

Components Capabilities

- Edge banding
- Quality cutting
- Cut-to-size
- Line boring
- Specialty packaging
